February 8, 2017

Dear Google,

I am a Computing Science student at the University of Alberta in my final year. I am ecstatic at the opportunity to be considered for a position at Google because of the welcoming culture, innovative products, and opportunities to continually learn and push boundaries.

I believe I am an excellent candidate for Google as I bring real world web development experience from my internship at Intuit. This experience at Intuit gave me extensive experience in best development practices in web development by using tools such as JavaScript, React and Redux. I had the fortunate opportunity to move around teams which was excellent practice in picking up new languages and technologies. This learning and mentorship allowed me to take the lead on a project where I designed, delivered, and tested a system that eased customer grievances by bring contextual settings to the forefront.

At my time at the University of Alberta I have learned that there is no compromise for hard word. This work ethic has allowed me to maintain a 3.8 cumulative GPA as well as a 4.0 GPA in Computing Science classes. Throughout these classes, I have been exposed to a number of languages including using Python for projects on reinforcement learning, as well as Java in making a Travel Expense Android application.

During high school I started my own company in an effort to graduate from university with no debt. I accomplished that goal, and in doing so learned how to effectively communicate with customers. It also taught me the effectiveness of time management, hard work and accountability.

I am excited to be considered for this position and would like to meet with you to discuss further. I can be reached at (780) 289-7577 or kylecarlstrom@gmail.com. I look forward to hearing from you.

Sincerely,

Kyle Carlstrom
